

DuPont™ Sontara®  
STENCIL CLEANING FABRIC

*The miracles of science™*

Sharp Screen printing on printed circuit boards (PCBs) requires clean stencils, Dupont™ Sontara stencil cleaning fabric is specially engineered for underscreen cleaning rolls, combining absorbency, strength, and low-linting characteristics. The fabric quickly removes excess paste and adhesives from stencils – build-up that can ruin PCBs. That helps you produce better boards – faster.

#### Absorbency boosts productivity

These fabrics are exceptionally absorbent – designed to absorb and hold cleaning solvents and able to pick up even small amounts of paste and adhesive that can cause bridging in fine-pitch assemblies. That helps keep your equipment running at high efficiency. Replacing conventional underscreen cleaning rolls with Dupont™ Sontara® cleanmaster stencil cleaning fabric can both increase your line yield and improve quality.

#### Low-linting improves printing quality

Lint is the chief enemy of PCBs because it blocks stencil apertures and prevents gasketing between the stencil and board.

Dupont™ Sontara® cleanmaster stencil cleaning fabric is remarkably low-linting – and it's manufactured without glue or binders that can break down and stick to stencils and boards.

#### Strength helps reduce downtime

The fabric is engineered strong. It's highly resistant to tearing, both wet and dry, and compatible with a wide range of solvents. This helps keep machines running at peak performance longer, reducing downtime and operator intervention.

#### Get on board for great value

Dupont™ Sontara® cleanmaster stencil cleaning fabric can save you both time and money by helping prevent waste while increasing productivity.

#### Label of Dupont™ Sontara® stencil cleaning fabric
